

# Contents

<b>1 Bass stable range</b> .....	1
1.1 Stable range conditions .....	1
1.2 Ring theoretical constructions and their stable range .....	10
1.3 Completion to invertible matrix .....	10
1.4 Stabilization in K-theory .....	10
1.5 Examples and stable range calculations .....	10
<b>2 Rings ruled by units, annihilators and idempotents</b> .....	11
2.1 Von Neumann regular rings .....	11
2.2 Exchange, clean and idempotent stable range one rings .....	11
2.3 Potent and semipotent rings .....	21
2.4 VNL, NJ and semiregular rings .....	21
2.5 PM and Gelfand rings .....	21
2.6 Semihereditary and morphic rings .....	21
<b>3 Rings defined by matrix canonical forms</b> .....	24
3.1 Hermite and elementary divisor rings .....	24
3.2 Bezout rings and Shores test .....	30
3.3 Stable range and matrix diagonalization .....	30
3.4 Pullbacks and D+M-construction .....	30
<b>4 Adequacy</b> .....	34
4.1 Adequate and coadequate elements .....	34
4.2 Stable range of adequate rings .....	40
4.3 Zero-adequate and everywhere adequate rings .....	42
<b>5 Finite homomorphic images</b> .....	48
5.1 Minimal prime spectrum and fractionally regular rings .....	48

5.2 Semiregularity of zero-adequate rings	55
5.3 Avoidable rings	57
5.4 Effective and Dirichlet rings	60
5.5 Neat range one	63
5.6 Meaningful ring	65
5.7 Bezout morphic rings and units lifting	71
5.8 Gelfand range one and Bezout $PM^*$ -domains	75
5.9 Lattice-ordered groups and Montgomery counterexample	79
5.10 Rings of continuous functions $C(X)$	83
<b>6 Bezout domains and their overrings</b>	<b>85</b>
6.1 Almost stable range one	85
6.2 Finite localizing embeddings	92
6.3 Full matrices over elementary divisor rings	99
6.4 Sharp Bezout domains	103
<b>7 Diagonalization over noncommutative rings</b>	<b>107</b>
7.1 Simple Ore and Bezout rings	107
7.2 Idempotent matrix diagonalization	119
7.3 Distributive Bezout rings and Dubrovin condition	121
7.4 When $GL_n(R)$ is closed under transposition	123
7.5 Right Bezout rings and unimodular rows	126
<b>8 Rings defined by range conditions</b>	<b>129</b>
8.1 Neat range one and stable range	129
8.2 Semihereditary and von Neumann regular range one	130
8.3 Additive range one	137
8.4 Dyadic range one	137
<b>9 Problems related to range conditions</b>	<b>143</b>
9.1 Rings ruled by annihilators and idempotents	144
9.2 Commutative Bezout Rings	146
9.3 Nontrivial Finite Homomorphic Images of Commutative Bezout Rings	146
9.4 Adequate Rings and Their Generalizations	147
9.5 Local properties and ranges of commutative rings	148
9.6 Noncommutative Bezout rings	150
9.7 Ultimate problems	152
